The foundational principles of locomotive technology were laid during this period, driven by the Industrial Revolution's demand for rapid movement of raw materials such as coal, iron, and textiles.

The Birth of the Modern Locomotive

The Early Steam Locomotives

The first successful steam-powered railway locomotive is credited to George Stephenson, an English engineer often called the "Father of Railways." His 1814 experimental locomotive, Blücher, and later, the 1829 Locomotion No. 1 built for the Stockton and Darlington Railway, set the stage for locomotive development.

Key innovations introduced by Stephenson and contemporaries included:
