Common Abnormalities and Their Physiological Basis:

- Anemia (low hemoglobin): Possible blood loss, iron deficiency, or marrow suppression.
- Leukocytosis (high WBC): Infection, inflammation, or stress response.
- Thrombocytopenia (low platelets): Bone marrow suppression, autoimmune destruction.

Electrolyte Imbalances

Common Findings and Causes:

- Hyponatremia (low sodium): Excessive water intake, SIADH, adrenal insufficiency.
- Hyperkalemia (high potassium): Kidney failure, acidosis, cell breakdown.
- Hypocalcemia: Hypoparathyroidism, vitamin D deficiency.

Physiological Significance:

Electrolytes regulate nerve conduction, muscle contraction, and acid-base balance. Imbalances can cause arrhythmias, muscle weakness, or neurological disturbances.

Liver Function Tests (LFTs)

Key Enzymes:

- ALT (Alanine transaminase): Elevated in hepatocellular injury.
- AST (Aspartate transaminase): Also indicates cellular damage.
- Bilirubin: Increased levels suggest impaired conjugation or excretion.

The liver's role in detoxification, protein synthesis, and bile production means that its impairment manifests in specific lab abnormalities, aiding diagnosis of conditions like hepatitis, cirrhosis, or biliary obstruction.

Kidney Function Tests

- Creatinine: Reflects glomerular filtration rate (GFR).
- Urea (BUN): Indicates protein metabolism and renal clearance.

Physiological Insights:

The kidneys filter blood, maintain electrolyte balance, and regulate blood pressure. Abnormal results suggest renal impairment, dehydration, or systemic disease.

Blood Glucose and Lipid Profile

- Fasting blood glucose: Elevated levels point to diabetes mellitus.
- Lipid profile: High LDL or triglycerides increase cardiovascular risk.

Physiology:

Glucose regulation involves insulin and glucagon. Lipids are essential for cell membranes but excessive levels contribute to atherosclerosis.

Practical Applications: Using Laboratory Investigations to Answer Clinical Questions

Healthcare professionals often face questions such as:

- Is the patient anemic? (CBC findings)
- Does the patient have renal impairment? (Creatinine, BUN)
- Are there signs of liver damage? (LFTs)
