Question 2: Short Answer

Explain the process of natural selection.

Answer:

Natural selection is the process by which organisms with advantageous heritable traits are more likely to survive and reproduce. Over generations, these favorable traits become more common in the population, leading to evolution. This process depends on variation within populations, differential survival, and reproduction.

Question 3: Data Interpretation

Given a graph showing the growth of bacteria over 24 hours, identify the phase where the bacteria undergo exponential growth, and explain why.

Answer:

The exponential growth phase is where the bacteria population increases rapidly and continuously, typically seen as a steep upward curve on the graph. This occurs because resources are abundant, and bacteria divide at a constant rate.
